

HealthySteps Specialists provide consultation on early childhood development to families where they are most likely to access it – the military pediatric primary care clinic. As an integral part of the pediatric team, HealthySteps Specialists are licensed counselors who bring focus to the important interwoven skills needed for families to foster healthy child development and life-long well-being: social-emotional development; language and literacy skills; cognition skills; and perceptual, motor, and physical development. HealthySteps Specialists build strong relationships with families and providers so that communities can ensure all babies have a strong start during this critically important time in their life.
